Increase the PHP File Upload Limit

By default, XAMPP imposes a 128M limit on files uploaded through PHP. To increase the allowed file size for uploads through PHP, follow these steps:

1. Edit the *php.ini* file in the *etc/* subdirectory of your XAMPP installation directory (usually, */opt/lampp*). Within this file, find the *post_max_size* and *upload_max_filesize* variables and change them to reflect the new file upload limit. For example, to restrict uploads to not more than 16M, change these variables as shown below:

   ```
   ; Maximum size of POST data that PHP will accept.
   ; http://php.net/post-max-size
   post_max_size=16M
   ...
   ; Maximum allowed size for uploaded files.
   ; http://php.net/upload-max-filesize
   upload_max_filesize=16M
   ```

2. Save your changes to the file.

3. Restart the Apache server.

The new file upload limit will now come into effect.
